

Vandolph Capacio Reyes

Senior Technical Project Manager & Full Stack Developer

vandolphreyes29@gmail.com · vandolphreyes.github.io

ABOUT

As an experienced Senior Technical Project Manager and Full Stack Developer, I lead cross-functional teams in building scalable, high-performance web platforms and automation systems. My expertise spans AWS, Google Cloud Platform (GCP), Next.js, Laravel, and cloud-native application deployment — delivering reliable, efficient, and business-driven solutions. I bring a strong background in project management, system architecture, and workflow automation, ensuring every product is delivered with precision, security, and alignment to business goals. I've also contributed to AI-enhanced applications using the Google Agent Development Kit (ADK) and Model Context Protocol (MCP) — integrating intelligent features into practical, production-ready systems. Known for my clear communication, hands-on leadership, and collaborative approach, I take pride in driving projects from concept to completion while fostering a culture of transparency, growth, and innovation across my teams.

WORK EXPERIENCE

AI Developer

June 2025 – October 2025 · lilisolutions.ai

- Develop and manage AI-driven web applications and distributed systems within the Google Cloud Platform (GCP) ecosystem
- Utilize the Google Agent Development Kit (ADK) to create and deploy intelligent chatbots via Cloud Run and Agent Engine
- Architect and maintain self-hosted infrastructure in GCP, including n8n, MeiliSearch, and MCP (Model Context Protocol) integrations
- Design and deploy Next.js applications on Firebase Hosting, integrating with Firestore and Data Connect for real-time synchronization

Senior Technical Project Manager

April 2019 – June 2025 · Outbounders.com

- Lead multiple development teams handling web, mobile and infrastructure projects from planning to deployment
- Architect and maintain scalable and secure system backends, optimizing performance and reliability across products
- Implement and oversee CI/CD pipelines, automating builds, testing, and deployment workflows
- Collaborate with clients and stakeholders to translate business requirements into clear technical plans and deliverables
- Manage project timelines, team resources, and sprint goals using Agile methodology, ensuring on-time, high-quality delivery

Senior Full Stack Developer

December 2015 – April 2019 · Outbounders.com

- Developed and maintained scalable full-stack web applications across multiple product teams
- Designed and managed servers, databases, and cloud infrastructure, ensuring uptime and performance stability
- Integrated payment gateways, third-party APIs, and workflow automations to support business operations
- Improved frontend and backend performance, reducing load times and enhancing user experience across devices
- Collaborated with designers and cross-functional teams to deliver polished, user-centric web interfaces

Junior Full Stack Developer

March 2014 – December 2015 · TimeRiver Design

- Developed responsive front-end and back-end web applications using CodeIgniter and FuelPHP frameworks
- Built and customized WordPress websites for clients, ensuring usability and performance
- Created interactive 2D browser-based games using Enchant.js
- Developed cross-platform mobile apps with PhoneGap, supporting both iOS and Android environments
- Served as an online programming instructor, teaching web and game development fundamentals

EDUCATION

Bachelor of Science in Information Technology

June 2010 – March 2014 · Southwestern University PHINMA

1st Year Level President · Ambassador · President Council Treasurer

Awards: Dean's Lister, Researcher of the Year, Professor's List (Data Structures, Computer Programming 02, Computer Organization and Assembly Language, Specialization Elective 3, Communication & Development)

SKILLS

Core Strengths: Excellent communication and interpersonal skills, strong multitasking and organizational abilities, team-oriented leadership, problem-solving and conflict resolution, big-picture thinker aligning technical execution with business objectives

Project & Workflow Management: Jira, ClickUp, Asana, Trello, Agile/Scrum methodologies, CI/CD implementation, Technical documentation

Infrastructure & Cloud Management: Google Cloud Platform (Cloud Run, Firebase Hosting, Firestore, Data Connect, Compute Engine), Self-hosted systems (n8n, MeiliSearch, MCP), AWS (EC2, S3), DigitalOcean, Cloudways, Cloudflare, DNS, server and database administration

Web Development & CMS: Next.js, Laravel, CodeIgniter, WordPress (Elementor), Joomla, HTML, CSS, JavaScript, PHP, RESTful API design and integration

Automation & Integrations: n8n workflow automation, GHL API, API integrations (OpenAI, Google, Facebook, UVDesk, SendGrid, Mailchimp), payment systems (Stripe, PayPal)

Analytics & Marketing Tools: Google Tag Manager (GTM), Google Analytics (GA4), Looker Studio, Facebook Pixel & Conversion API, GHL Automation & APIs, ActiveCampaign

AI & Emerging Technologies: AI chatbots built and deployed using Google ADK integrated with GCP-based web systems, distributed AI systems with Next.js and AI agents, self-hosted MeiliSearch for embeddings and vector-based querying, MCP-based automation workflows for coding assistance and multi-agent orchestration, AI-driven automation across n8n, GCP services, and internal tools

Additional Technical Knowledge: WordPress plugin development & customization, FuelPHP, Mautic CRM, game development (Enchant.js), Node.js, DeployHQ, WebSocket, WebRTC, Puppeteer, VICIdial, React Native (Expo), Swift Storyboard, Java, Moralis.io
